

REX COIN Growth & Income ETF

Objective

The Fund's primary investment objective is to pay weekly distributions. The Fund's secondary investment objective is to seek daily investment results, before fees and expenses, between 105% and 150% the daily percentage change of the common stock of Coinbase Global, Inc. (NASDAQ: COIN)

TBD%
Distribution Rate*

TBD%
30-Day SEC Yield**

*As of 6/4/2025. The Distribution Rate is the annual yield an investor would receive if the most recently declared distribution, which includes option income, remained the same going forward. The Distribution Rate is calculated by multiplying an ETF's Distribution per Share by fifty-two (52), and dividing the resulting amount by the ETF's most recent NAV. The Distribution Rate represents a single distribution from the ETF and does not represent its total return. There is no assurance that the fund will make a distribution in any given month. **Current distributions consist of 100% estimated return of capital (ROC). For full details on the composition of distributions, please refer to the latest 19a-1 notice.**

As of 5/31/2025. The 30-Day SEC Yield represents net investment income, which excludes option income, earned by such ETF over the 30-Day period, expressed as an annual percentage rate based on such ETF's share price at the end of the 30-Day period. **The REX COIN Growth & Income ETF has a gross expense ratio of 0.99%. There is no guarantee that the Fund will be successful in its attempt to provide leveraged exposure to COIN or pay weekly distributions.

Approach

Balanced Growth & Income

1/2 Portfolio Seeks to Generate Weekly Income via Covered Call Strategy

Call options are written on half the portfolio, seeking to generate consistent weekly income by capturing elevated volatility.

1.25x
Target*

1/2 Portfolio Remains Uncovered, Allowing for Uncapped Upside Potential

The other half remains fully exposed, preserving the ability to capture full price appreciation during market rallies and rebounds.

*The Fund targets 1.25x daily exposure to COIN; however, in accordance with its investment objective, actual leverage may range between 1.05x and 1.50x.

The performance data quoted represents past performance. Past performance does not guarantee future results. The investment return their original cost and current performance may be lower or higher than the performance quoted. Performance current to the most recent month-end can be obtained by calling 1-844-802-4004. Short term performance, in particular, is not a good indication of the fund's future performance, and an investment should not be made based solely on returns.

Market Price: The current price at which shares are bought and sold. Market returns are based upon the last trade price.

NAV: The dollar value of a single share, based on the value of the underlying assets of the fund minus its liabilities, divided by the number of shares outstanding. Calculated at the end of each business day.

IMPORTANT INFORMATION

Investing in the Fund involves a high degree of risk. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Before investing you should carefully consider the Fund's investment objectives, risks, charges and expenses. This and other information is in the prospectus. Please read the prospectuses carefully before you invest. Investments involve risk. Principal loss is possible. For COII prospectuses, please visit rexshares.com/coii or call 1-844-802-4004.

THE FUND, TRUST, ADVISER, AND SUB-ADVISER ARE NOT AFFILIATED WITH THE FUND'S UNDERLYING SECURITIES.

The Fund's investment exposure is concentrated in the same industries as that assigned to the underlying securities. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its investment objective.

Indirect Investment Risk. Investing in the Fund is not the same as investing directly in COIN. Shareholders have no voting rights or direct claims to COIN's dividends or distributions. COIN is not involved with the Fund, nor has it endorsed or participated in this offering.

Active Management Risk. The Fund is actively managed. Decisions made by the Adviser and/or Sub-Adviser—including use of models or technical signals—may not produce the desired results and may cause the Fund to underperform relative to passive strategies.

Distribution Risk. Weekly distributions may include return of capital and reduce NAV. These payments are not guaranteed and may fluctuate. Tax treatment of such distributions may reduce after-tax returns and affect shareholder cost basis.

Concentration Risk. The Fund invests heavily in COIN and the semiconductor industry. This lack of diversification makes the Fund more susceptible to adverse economic, regulatory, or market events impacting this single issuer or sector.

Equity Securities Risk. Equity securities are subject to changes in value, and their values may be more volatile than those of other asset classes. Equity securities prices fluctuate for several reasons, including changes in investors' perceptions of the financial condition of an issuer or the general condition of the relevant equity market, such as market volatility, or when political or economic events affecting an issuer occur.

Leverage Risk. While the Fund does not seek leveraged exposure, the Fund seeks to achieve and maintain the exposure to the price of various securities by using the leverage inherent in options contracts. Therefore, the Fund is subject to leverage risk. When the Fund purchases or sells an instrument or enters into a transaction without investing an amount equal to the full economic exposure of the instrument or transaction, it creates leverage, which can result in the Fund losing more than it originally invested. As a result, these investments may magnify losses to the Fund, and even a small market movement may result in significant losses to the Fund. Leverage may also cause the Fund to be more volatile because it may exaggerate the effect of any increase or decrease in the value of the Fund's portfolio securities. Options trading involves a degree of leverage and as a result, a relatively small price movement in futures instruments may result in immediate and substantial losses to the Fund.

Compounding Risk. The Fund seeks daily returns of 105%-150% of COIN's price movement. Over periods longer than a single day, compounding and volatility may cause results to deviate significantly from that daily multiple.

Derivatives And Options Risk. The Fund uses derivatives—including options and swaps—which amplify losses in volatile markets. Options pricing may be erratic, especially for FLEX Options or thinly traded contracts. Liquidity and valuation issues may also arise.

Distribution and Distribution Tax Risk. Weekly distributions may include return of capital and reduce NAV. These payments are not guaranteed and may fluctuate. Tax treatment of such distributions may reduce after-tax returns and affect shareholder cost basis.

Market, Liquidity, and Premium/Discount Risk. Market conditions—especially in COIN shares—may cause large premiums or discounts, wide bid/ask spreads, or trading halts. The Fund may not be able to trade effectively during periods of volatility or reduced market liquidity.

Flex Options Risk. FLEX Options carry unique customization features but may have less liquidity and price transparency. Their value may deviate from the underlying reference asset.

Rebalancing Risk. The Fund rebalances daily to maintain target leverage. If it cannot rebalance effectively, performance may deviate from the stated objective.

Intraday Investment Risk. Investors buying or selling Fund Shares intraday may realize returns that differ from the Fund's stated leverage due to the timing of COIN price movements.

Price Participation Risk. The Fund's covered call strategy limits upside participation in COIN gains, while retaining full downside exposure. This may cause underperformance in rising markets.

Coinbase Global, Inc. Investing Risks. As of the date of this prospectus, COIN faces risks associated with companies in the capital markets industry and financials sector, as well as those relating to the "crypto industry ecosystem." The technology relating to the crypto industry ecosystem is new and developing and the risks associated with crypto assets may not fully emerge until the technology is widely used. Technologies utilizing cryptography are used by companies to optimize their business practices, whether by using the technology within their business or operating business lines involved in the operation of the technology. Cryptography refers to a set of techniques designed to allow for secure communication in the presence of adversarial behavior. Blockchain is a well-known example of a technology that relies on cryptography. A blockchain is comprised of unchangeable, digitally recorded data in packages called "blocks." These digitally recorded blocks of data are stored in a linear "chain." Each block in the chain contains data (e.g., a transaction), that is cryptographically connected to the previous block in the chain, ensuring all data in the overall "blockchain" has not been tampered with and remains unchanged. The cryptographic keys necessary to transact a crypto asset may be subject to theft, loss, or destruction, which could adversely affect a company's business or operations if it were dependent on such an asset. Competing platforms and technologies may be developed such that consumers or investors use an alternative to crypto assets. There may be risks posed by the lack of regulation for crypto assets and any future regulatory developments could affect the viability and expansion of the use of crypto technologies. Recently, U.S. securities regulators have brought actions against companies operating in the crypto industry ecosystem for violations of U.S. securities laws. To the extent such an action is brought against a company held by the Fund, the value of such a holding could decrease significantly. Because companies operating in the crypto industry ecosystem may operate across many national boundaries and regulatory jurisdictions, it is possible that such companies may be subject to widespread and inconsistent regulation. Companies operating in the crypto industry ecosystem that rely on third party products may be subject to technical defects or vulnerabilities beyond a company's control. Because many crypto assets do not have a standardized exchange, like a stock market, there is less liquidity for such assets and greater possibility of volatility, fraud or manipulation. In addition, these companies may engage in other lines of business unrelated to the crypto industry ecosystem and these lines of business could adversely affect their operating results. Such companies may be engaged in activities traditionally comprising the information technology sector and financial sectors. These companies also may not be able to develop crypto technology applications or may not be able to capitalize on those applications. Technologies also may never be fully implemented, which could adversely affect an investment in such companies. Companies that use crypto technologies may be subject to cybersecurity risk.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Other Risks. These include Equity Securities Risk, Interest Rate Risk, Inflation Risk, Debt Securities Risk, Dividend Risk, Operational Risk, Valuation Risk, Trading Issues Risk, Special Tax Risk, and U.S. Government Securities Risk—all of which are detailed in the Fund's pros

Non-Diversification Risk. The Fund is classified as "non-diversified" under the 1940 Act. As a result, the Fund is only limited as to the percentage of its assets which may be invested in the securities of any one issuer by the diversification requirements imposed by the Internal Revenue Code of 1986, as amended. The Fund may invest a relatively high percentage of its assets in a limited number of issuers. As a result, the Fund may be more susceptible to a single adverse economic or regulatory occurrence affecting one or more of these issuers, experience increased volatility and be highly invested in certain issuers.

Call Option. A call option is a financial contract that gives the buyer the right, but not the obligation, to buy an underlying asset at a specified price within a certain time period.

Covered Call Strategy. A covered call strategy involves holding a long position in a stock or ETF while simultaneously selling call options on that same asset to generate income. The goal is to earn premium income from the call options while still participating in the asset's potential upside—up to the strike price of the calls.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by knowledgeable investors who understand the potential consequences of seeking targeted daily leveraged investment results, understand the risks associated with the use of leverage and are willing to monitor their portfolios frequently. The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. For periods longer than a single day, the Fund will lose money if COIN's performance is flat, and it is possible that the Fund will lose money even if COIN's performance increases over a period longer than a single day. An investor could lose the full principal value of his/her investment within a single day.
