

## OBJECTIVE

The Fund seeks daily investment results, before fees and expenses, of 200% of the daily performance of the publicly-traded common stock of Affirm Holdings, Inc. (NASDAQ: AFRM). **The Fund does not seek to achieve its stated investment objective for a period of time different than a trading day. Investing in the Funds is not equivalent to investing directly in AFRM.**

## BENEFITS

### TARGETED

Go where the action is. Zero in on the stocks and sectors you know best, with focused exposure to the companies shaping today's markets.

### LEVERAGED

Amplify your moves. Harness the power of leverage to pursue greater potential returns and capture opportunities with increased exposure.

### EFFICIENT

Use ETFs designed to give you streamlined, cost-effective access to single-stock and crypto price movements—without the complexity of derivatives trading.

## FUND INFORMATION

### Fund Information

<b>Fund Name</b>	T-REX 2X Long AFRM Daily Target ETF

<b>Market Price</b>	4.97%	-	-	-	-	-41.12%
<b>NAV</b>	5.46%	-	-	-	-	-40.94%

As of 12/31/25

*The performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance quoted. Performance current to the most recent month-end can be obtained by calling 1-844-802-4004. Short term performance, in particular, is not a good indication of the fund's future performance, and an investment should not be made based solely on returns.*

**Market Price:** The current price at which shares are bought and sold. Market returns are based upon the last trade price.

**NAV:** The dollar value of a single share, based on the value of the underlying assets of the fund minus its liabilities, divided by the number of shares outstanding. Calculated at the end of each business day. Performance greater than 1 year is annualized.

**Investing in the funds involves a high degree of risk. Unlike traditional ETFs, or even other leveraged and/or inverse ETFs, these leveraged and/or inverse single-stock ETFs track the price of a single stock rather than an index, eliminating the benefits of diversification. Leveraged and inverse ETFs pursue daily leveraged investment objectives, which means they are riskier than alternatives which do not use leverage. They seek daily goals and should not be expected to track the underlying stock's performance over periods longer than one day. They are not suitable for all investors and should be utilized only by investors who understand leverage risk and who actively manage their investments. The Funds will lose money if the underlying stock's performance is flat, and it is possible that the AFRU Fund will lose money even if the underlying stock's performance increases over a period longer than a single day.**

## ABOUT

T-REX is brought to you by REX Shares & Tuttle Capital Management.

REX is an innovative ETP provider that specializes in alternative-strategy ETFs and ETNs. The firm created the MicroSectors™ and co-created the T-REX product lines of leveraged & inverse tools for traders and recently launched a series of option-based income strategies. The firm is rooted in decades of experience building inventive solutions that solve for a range of specific challenges in investor and trader portfolios.

Tuttle Capital Management is an industry leader in offering thematic and actively managed ETFs. TCM utilizes informed agility when managing portfolios, an approach that, from an informed standpoint, can assess and blend effective elements from multiple investment styles, and, from a position of agility, aims to stay in harmony with market trends without being too passive or too active.

# IMPORTANT INFORMATION

*An investor should carefully consider a Fund's investment objective, risks, charges, and expenses before investing. A Fund's prospectus and summary prospectus contain this and other information about the REX Shares. To obtain a Fund's prospectus and summary prospectus call 1-844-802-4004. A Fund's prospectus and summary prospectus should be read carefully before investing.*

**Fixed Income Securities Risk.** When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund.

**Effects of Compounding and Market Volatility Risk.** The Fund has a daily leveraged investment objective and the Fund's performance for periods greater than a trading day will be the result of each day's returns compounded over the period, which is very likely to differ from 200% of AFRM's performance, before fees and expenses. Compounding affects all investments, but has a more significant impact on funds that are leveraged and that rebalance daily and becomes more pronounced as volatility and holding periods increase. The impact of compounding will impact each shareholder differently depending on the period of time an investment in the Fund is held and the volatility of AFRM during the shareholder's holding period of an investment in the Fund.

**Leverage Risk.** The Fund obtains investment exposure in excess of its net assets by utilizing leverage and may lose more money in market conditions that are adverse to its investment objective than a fund that does not utilize leverage. An investment in the Fund is exposed to the risk that a decline in the daily performance of AFRM will be magnified. This means that an investment in the Fund will be reduced by an amount equal to 2% for every 1% daily decline in AFRM, not including the costs of financing leverage and other operating expenses, which would further reduce its value.

**Derivatives Risk.** Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. Investing in derivatives may be considered aggressive and may expose the Fund to greater risks, and may result in larger losses or small gains, than investing directly in the reference assets underlying those derivatives, which may prevent the Fund from achieving its investment objective.

**Swap Agreements.** Swap agreements are entered into primarily with major global financial institutions for a specified period which may range from one day to more than one year. In a standard swap transaction, two parties agree to exchange the return (or differentials in rates of return) earned or realized on particular predetermined reference or underlying securities or instruments. The gross return to be exchanged or swapped between the parties is calculated based on a notional amount or the return on or change in value of a particular dollar amount invested in a reference asset. Swap agreements are generally traded over-the-counter, and therefore, may not receive regulatory protection, which may expose investors to significant losses.

**Indirect Investment Risk.** Affirm Holdings, Inc. is not affiliated with the Trust, the Adviser, or any affiliates thereof and is not involved with this offering in any way, and has no obligation to consider the Fund in taking any corporate actions that might affect the value of the Fund. The Trust, the Fund and any affiliate are not responsible for the performance of Affirm Holdings, Inc. and make no representation as to the performance of AFRM. Investing in the Fund is not equivalent to investing in AFRM. Fund shareholders will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to AFRM.

**Industry Concentration Risk.** The Fund will be concentrated in the industry to which Affirm Holdings, Inc. is assigned (i.e., hold more than 25% of its total assets in investments that provide exposure to the industry to which Affirm Holdings, Inc. is assigned). A portfolio concentrated in a particular industry may present more risks than a portfolio broadly diversified over several industries. As of the date of this prospectus, AFRM is assigned to the technology sector and the software-infrastructure industry.

**Rebalancing Risk.** If for any reason the Fund is unable to rebalance all or a part of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with its investment objective. In these instances, the Fund may have investment exposure to AFRM that is significantly greater or significantly less than its stated multiple. The Fund may be more exposed to leverage risk than if it had been properly rebalanced and may not achieve its investment objective, leading to significantly greater losses or reduced gains.

**Counterparty Risk.** A counterparty may be unwilling or unable to make timely payments to meet its contractual obligations or may fail to return holdings that are subject to the agreement with the counterparty.

**Daily Correlation Risk.** There is no guarantee that the Fund will achieve a high degree of correlation to AFRM and therefore achieve its daily leveraged investment objective. The Fund's exposure to AFRM is impacted by AFRM's movement. Because of this, it is unlikely that the Fund will be perfectly exposed to AFRM at the end of each day. The possibility of the Fund being materially over- or under-exposed to AFRM increases on days when AFRM is volatile near the close of the trading day. Market disruptions, regulatory restrictions and high volatility will also adversely affect the Fund's ability to adjust exposure to the required levels.

**Liquidity Risk.** Holdings of the Fund may be difficult to buy or sell or may be illiquid, particularly during times of market turmoil. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to buy or sell an illiquid security or derivative instrument at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with AFRM. There is no assurance that a security or derivative instrument that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund. To the extent that AFRM value increases or decreases significantly, the Fund may be one of many market participants that are attempting to transact in the AFRM.

**Non-Diversification Risk.** The Fund is classified as "non-diversified" under the Investment Company Act of 1940, as amended. This means it has the ability to invest a relatively high percentage of its assets in the securities of a small number of issuers or in financial instruments with a single counterparty or a few counterparties.

**New Fund Risk.** As of the date of this prospectus, the Fund has no operating history and currently has fewer assets than larger funds. Like other new funds, large inflows and outflows may impact the Fund's market exposure for limited periods of time.

**Technology Sector Risk.** The market prices of technology-related securities tend to exhibit a greater degree of market risk and sharp price fluctuations than other types of securities. These securities may fall in and out of favor with investors rapidly, which may cause sudden selling and dramatically lower market prices. Technology securities may be affected by intense competition, obsolescence of existing technology, general economic conditions and government regulation and may have limited product lines, markets, financial resources, or personnel. Technology companies may experience dramatic and often unpredictable changes in growth rates and competition for qualified personnel. These companies are also heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely impact a company's profitability. A small number of companies represent a large portion of the technology industry. In addition, a rising interest rate environment tends to negatively affect technology companies, those technology companies seeking to finance expansion would have increased borrowing costs, which may negatively impact earnings. Technology companies having high market valuations may appear less attractive to investors, which may cause sharp decreases in their market prices.

**Sector Concentration Risk.** The trading prices of the Fund's underlying securities may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, where applicable, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies.

**Underlying Security Investing Risk.** Issuer-specific attributes may cause an investment held by the Fund to be more volatile than the market generally. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

**The Funds' investment adviser will not attempt to position each Fund's portfolio to ensure that a Fund does not gain or lose more than a maximum percentage of its net asset value on a given trading day. As a consequence, if a Fund's underlying security moves more than 50%, as applicable, on a given trading day in a direction adverse to the Fund, the Fund's investors would lose all of their money.**
